

S60...W Contrast sensor

INSTRUCTION MANUAL

CONTROLS

OUTPUT LED

The yellow LED ON indicates that the N.O. (normally open) output status is closed.

READY/ERROR LED (bicolour)

When the bicoloured LED is continuously green, the sensor is operating in a normal condition and it is ready to function correctly (stability condition).

The red and green blinking of the LED indicates a wrong sensor setting. Please refer to the "SETTING" paragraph to get the correct setting procedure.

SET PUSHBUTTON

A long pressure on the pushbutton activates the self-setting procedure. The REMOTE input allows the external control of the SET pushbutton.

INSTALLATION

The sensor can be positioned by means of the three housing's holes using two screws (M4x25 or longer, 1.5 Nm maximum tightening torque) with washers.

Various orientable fixing brackets to ease the sensor positioning are available (please refer to the accessories listed in the general catalogue).

The operating distance is measured from the front surface of the sensor optics.

The M12 connector can be oriented at two different positions using the specific fastening spring and rotating the block of 180°.

CONNECTIONS

* = Connect the REMOTE wire to 0 V if not used.

NOTE

If a setting error will occur please repeat again the EASY TOUCH™ setting procedure, in order to be sure to restart the setting procedure correctly.

DIMENSIONS

TECHNICAL DATA

Power supply:	10 ... 30 Vdc (limit values)
Ripple:	2 Vpp max.
Current consumption (output current excluded):	30 mA max.
Outputs:	PNP or NPN; 30 Vdc max. (short-circuit protection)
Output current:	100 mA
Output saturation voltage:	≤ 2 V
Response time:	100 µs max.
Switching frequency:	5 KHz
Indicators:	OUTPUT LED (YELLOW) / READY/ERROR LED (GREEN/RED)
Setting:	SET pushbutton
Data retention:	non volatile EEPROM memory
Operating temperature:	-10 ... 55 °C
Storage temperature:	-20 ... 70 °C
Electrical shock protection:	Class 2
Operating distance (typical values):	19 mm ±2 mm
Minimum spot dimension:	3.5 mm at 19 mm
Emission type:	white light LED (400-700nm)
Ambient light rejection:	according to EN 60947-5-2
Vibrations:	0.5 mm amplitude, 10 ... 55 Hz frequency, for every axis (EN60068-2-6)
Shock resistance:	11 ms (30 G) 6 shock for every axis (EN60068-2-27)
DARK/LIGHT selection:	DARK mode with EASY TOUCH™ / Automatic with fine detection
Housing:	ABS
Lens:	glass window (sloped); glass lens
Mechanical protection:	IP67
Connections:	2 m cable Ø 4 mm / M12-4 pole connector
Weight:	90 g. max. cable vers. / 40 g. max. connector vers.

DELAY FUNCTION

Press the SET pushbutton and keep it pressed until the READY/ERROR LED turns off, blinking and turns off again, then release the SET pushbutton.

If the delay function *is not active* the READY/ERROR LED blinks green with 2 quick pulses.

If the delay function *is active* the READY/ERROR LED blinks green with 4 quick pulses.

Press and release immediately the SET pushbutton in order to change the function status, the new function status is indicated the READY/ERROR LED as the mode before described. The delay function adds 20ms to the duration of the sensor's ON pulse.

SETTING

EASY TOUCH™

The sensor uses the patent-covered EASY TOUCH™ technology that allows a rapid and safe self-setting of the product.

- Two different setting possibilities are available:
- **EASY TOUCH™**; a long pressure of the SET pushbutton allows self-setting.
 - **FINE DETECTION**; to be used only in particularly critical conditions. This setting procedure is used only when the EASY TOUCH™ is not sufficient.

S60...W setting

To achieve a correct sensor functioning, the coloured mark or object to be detected has to be placed at the right reading distance.

- **EASY TOUCH™ (standard detection in the DARK mode)**
The EASY TOUCH™ technology allows the functioning in the DARK mode (mark presents a lower light intensity respect to the background). The mark to detect has to be placed correctly at the right reading distance within the sensor spot. Press the SET pushbutton until the READY/ERROR LED turns off. Release the SET pushbutton and wait for the READY/ERROR LED to turn green. The sensor is now ready to detect the pre-set coloured mark or object (output LED turns on when the N.O. output is closed).

- **Fine detection (DARK or LIGHT mode)**
This mode offers an improved detection precision. The sensor can function either in the DARK operating or in the LIGHT operating mode (light-coloured mark on dark background).

The operating mode is selected automatically by the sensor. The mark to detect has to be placed correctly at the right reading distance within the sensor spot.

Press the SET pushbutton. The READY/ERROR LED turns off. Keep the SET pushbutton pressed until the READY/ERROR LED blinks green. Place the background under the sensor spot.

Press the SET pushbutton again until the READY/ERROR LED turns off. The sensor is now ready to detect, with a very high precision, the pre-set coloured mark (output LED turns on, READY/ERROR LED turns green).

The output LED is ON and the N.O. output is closed, when the sensor is positioned on the pre-set coloured mark.

REMOTE FUNCTION

The REMOTE wire, if connected to +Vdc, is equal to the pressure of the SET button. If the REMOTE wire is connected to +Vdc, when the sensor is powered ON, the **keyboard lock** function is activated; the SET button is no longer active. To deactivate the **keyboard lock** function, the sensor has to be turned off and powered again with the REMOTE wire not connected or connected to 0V.

The sensors are NOT safety devices, and so MUST NOT be used in the safety control of the machines where installed.
